Thermo Scientific AquaSensors DataStick

ORP measurement system

Thermo Scientific™ AquaSensors DataStick measurement system for universal plug & play.

Markets/Applications

- · Wastewater treatment
- Metal finishing (chrome/cyanide destruct)
- Bleaching pulp
- Disinfection control

Thermo Scientific™ AquaSensors ORP DataStick™

- · Differential ORP measurement
- Pre-calibrated (no field calibration required)
- Plug & play sensor heads
- Replaceable quad junction salt bridges
- Electrode protection options
- Offered in a variety of materials
- Direct data reporting (24-bit)
- Plug & play industrial communications adapters

Connect this ORP sensor directly to a PLC (Programmable Logic Controller) for seamless integration with industrial control systems. Use any computer to display data, calibrate and customize the measurement without an intermediate analyzer electronics box. Sensor heads are pre-calibrated and can be replaced or exchanged with any other type of sensor without taking the system down. Save space, time and money.

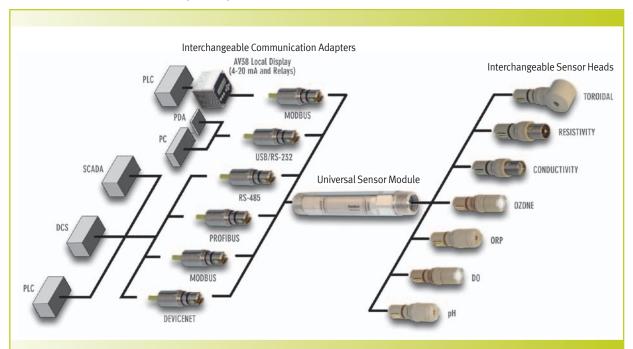

Engineering Specifications

- The ORP sensor shall be of Differential Electrode Technique design using two electrodes to compare the process value to a stable internal reference solution. The standard electrode shall have non-flowing and foulingresistant characteristics.
- 2. The sensor shall have hex-shaped wrench flats to facilitate mounting, and shall be constructed of a material with exceptional chemical resistance and mechanical strength. This material shall enable the sensor to be installed in metal fittings without leakage usually caused by heating and cooling cycles when dissimilar materials are threaded together.
- The sensor shall have interchangeable, pre-calibrated plug-in sensor heads and communications adapters that can be installed without powering down the system.
- The sensor shall have 1 inch NPT threads on both ends to mount into a standard 1 inch pipe tee, a 1.5 inch union mounting, or immersion hardware.
- The built-in electronics of the sensor shall be completely encapsulated and O-ring sealed for protection from moisture and humidity.
- 6. The sensor shall have a built-in pre-amplifier, universal signal conditioning electronics, universal engineering

- units conversion, and interactive communications with a host computer or display interface using one of several protocols including Modbus® RTU, DeviceNetTM, PROFIBUSTM, USB, CANopen or Ethernet.
- The sensor shall have an integral temperature sensor to measure temperature independently.
- 8. The sensor shall include a titanium ground electrode (standard) to eliminate ground loop currents in the measuring electrode.
- 9. The sensor shall be Thermo Scientific AquaSensors ORP DataStick.

Thermo Scientific DataStick Analytical System

Key Components

DataStick

Provides universal conversion of sensor signals and interactive communications for measurement, calibration, configuration and diagnostics.

Differential ORP Sensor Head

Pre-calibrated for ORP and temperature. Can be plugged into any DataStick to yield accurate 24-bit data.

Communications Adapter

Plugs into the DataStick to provide power and direct interactive communications with control systems.

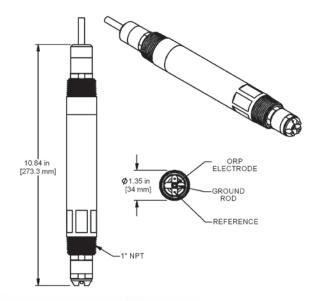

AV38 Local Display/Controller

2 line display and 7 key navigation. Data reporting with up to 2 current outputs. 2 Form C relays. Digital communications.

Thermo Scientific AguaSensors ORP DataStick

Provides universal conversion of sensor signals and interactive communications for measurement, calibration, configuration and diagnostics. Mounting adapters, junction boxes and recharge kits are available.

1.5 Inch Ball Valve

Hand Rail Mounting Assembly

Sanitary Mount
